Operations Research Letters 21 (1997) 253–254

operations research letters

Author Index to Volume 21

The issue number is given in front of the page numbers

Bertsimas, D. and C. Teo, The parsimonious property of cut covering problems and its applications (3) 123–132
Birge, J.R. and K.D. Glazebrook, Bounds on optimal values in stochastic scheduling (3) 107–114
Broughan, K., *see* Zhu, N. (1) 31– 37
Burlet, M. and O. Goldschmidt, A new and improved algorithm for the 3-cut problem (5) 225–227
Chen, Y.-M., *see* Doi, M. (5) 249–252
Chen, B. and A.P.A. Vestjens, Scheduling on identical machines: How good is LPT in an on-line setting? (4) 165–169
Chen, J. and G. Steiner, Approximation methods for discrete lot streaming in flow shops (3) 139–145
Chen, F. and Y.-S. Zheng, Sensitivity analysis of an (s, S) inventory model (1) 19– 23
Chen, Z.-L., Q. Lu and G. Tang, Single machine scheduling with discretely controllable processing times (2) 69– 76
Doi, M., Y.-M. Chen and H. Ōsawa, A queueing model in which arrival times are scheduled (5) 249–252
Erratum (4) 210
Ewerhart, C., Bayesian optimization and genericity (5) 243–248
Frey, A. and Y. Takahashi, A note on an M/GI/1/N queue with vacation time and exhaustive service discipline (2) 95–100
Ghosh, J.B. and J.N.D. Gupta, Batch scheduling to minimize maximum lateness (2) 77– 80
Glazebrook, K.D., *see* Birge, J.R. (3) 107–114
Goldschmidt, O., *see* Burlet, M. (5) 225–227
Gouweleeuw, F.N., The loss probability in an overloaded queue using the dual queue (2) 101–106
Greenberg, I., Markov chain approximation methods in a class of level-crossing problems (3) 153–158
Griffith, W.S., A note on the characterization of the Barlow and Wu continuum structure functions (2) 65– 67
Gupta, J.N.D., *see* Ghosh, J.B. (2) 77– 80
Hall, L.A., *see* Strusevich, V.A. (1) 11– 18
Haouari, M. and R. M'Hallah, Heuristic algorithms for the two-stage hybrid flowshop problem (1) 43– 53
Hasenbein, J.J., Necessary conditions for global stability of multiclass queueing networks (2) 87– 94
Hassin, R., S. Rubinstein and A. Tamir, Approximation algorithms for maximum dispersion (3) 133–137
Hêche, J.-F. and T.M. Liebling, Finding minimum area simple pentagons (5) 229–233
Hsu, V.N., T.J. Lowe and A. Tamir, Structured *p*-facility location problems on the line solvable in polynomial time (4) 159–164
Jansen, B., *see* Warners, J.P. (2) 55– 64
Kats, V. and E. Levner, A strongly polynomial algorithm for no-wait cyclic robotic flowshop scheduling (4) 171–179
Kellerer, H., V. Kotov, M.G. Speranza and Z. Tuza, Semi on-line algorithms for the partition problem (5) 235–242
Kotov, V., *see* Kellerer, H. (5) 235–242

Elsevier Science B.V.

Levner, E., *see* Kats, V. (4) 171–179
Liebling, T.M., *see* Hêche, J.-F. (5) 229–233
Lowe, T.J., *see* Hsu, V.N. (4) 159–164
Lu, Q., *see* Chen, Z.-L. (2) 69– 76

M'Hallah, R., *see* Haouari, M. (1) 43– 53
Miyazawa, M., *see* van Dijk, N.M. (4) 201–208

Nakade, K., K. Ohno and J.G. Shanthikumar, Bounds and approximations for cycle times of a U-shaped production line (4) 191–200
Nazareth, J.L., Deriving potential functions via a symmetry principle for nonlinear equations (3) 147–152
Nutov, Z. and M. Penn, Faster approximation algorithms for weighted triconnectivity augmentation problems (5) 219–223

Ohno, K., *see* Nakade, K. (4) 191–200
Ōsawa, H., *see* Doi, M. (5) 249–252

Penn, M., *see* Nutov, Z. (5) 219–223
Posner, M.J.M., *see* Wu, P. (4) 181–189

Roos, C., *see* Warners, J.P. (2) 55– 64
Rubinstein, S., *see* Hassin, R. (3) 133–137

Shanthikumar, J.G., *see* Nakade, K. (4) 191–200
Sherali, H.D. and C.H. Tuncbilek, New reformulation linearization/convexification relaxations for univariate and multivariate polynomial programming problems (1) 1– 9
Speranza, M.G., *see* Kellerer, H. (5) 235–242
Stein, C. and J. Wein, On the existence of schedules that are near-optimal for both makespan and total weighted completion time (3) 115–122
Steiner, G., *see* Chen, J. (3) 139–145
Strusevich, V.A. and L.A. Hall, An open shop scheduling problem with a non-bottleneck machine (1) 11– 18
Szkatula, K., The growth of multi-constraint random knapsacks with large right-hand sides of the constraints (1) 25– 30

Takahashi, Y., *see* Frey, A. (2) 95–100
Tamir, A., *see* Hsu, V.N. (4) 159–164
Tamir, A., *see* Hassin, R. (3) 133–137
Tang, G., *see* Chen, Z.-L. (2) 69– 76
Teo, C., *see* Bertsimas, D. (3) 123–132
Terlaky, T., *see* Warners, J.P. (2) 55– 64
Tuncbilek, C.H., *see* Sherali, H.D. (1) 1– 9
Tuza, Z., *see* Kellerer, H. (5) 235–242

van Dijk, N.N. and M. Miyazawa, Error bounds on a practical approximation for finite tandem queues (4) 201–208
Vestjens, A.P.A., *see* Chen, B. (4) 165–169

Warners, J.P., T. Terlaky, C. Roos and B. Jansen, Potential reduction algorithms for structured combinatorial optimization problems (2) 55– 64
Wein, J., *see* Stein, C. (3) 115–122
Wood, D.R., An algorithm for finding a maximum clique in a graph (5) 211–217
Wu, P. and M.J.M. Posner, A level-crossing approach to the solution of the shortest-queue problem (4) 181–189

Xie, J., Polynomial algorithms for single machine scheduling problems with financial constraints (1) 39– 42

Zaporozhets, A., A short proof of optimality of the Bottom Up algorithm for discrete resource allocation problems (2) 81– 85
Zheng, Y.-S., *see* Chen, F. (1) 19– 23
Zhu, N. and K. Broughan, On dominated terms in the general knapsack problem (1) 31– 37
